COMPARE

REPLACEMENT: 5 STEPS

FIVE STEPS required to do a typical job:

STEP 1:
REMOVE
TUB

It requires two men to remove a tub. It is hazardous since a tub can weigh a 1/4 ton.

STEP 2:
REPAIR
DAMAGE

Tub removal often causes damage to tile on floor and walls.

STEP 3:
PLUMBING

This removal requires plumbing disconnections and the removal of faucets and drains.

STEP 4:
INSTALL

A new tub will have to be installed, creating more costs.

STEP 5:
REPLACE

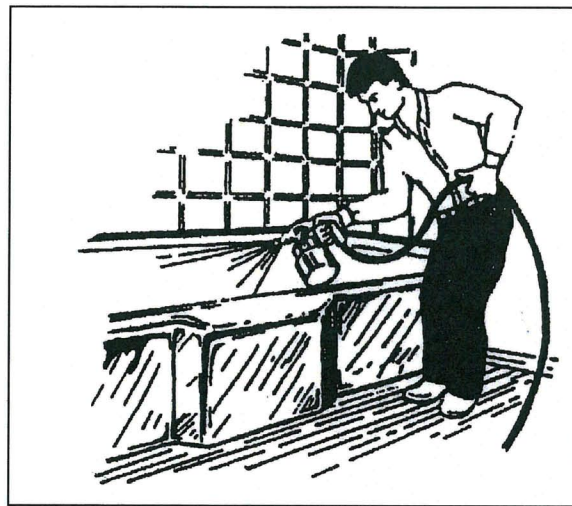

Replacement of tile and fixtures is a major expense.

RESURFACING:

1 STEP...1 DAY

The RESURFACING Process is 70% LESS than the high cost of replacement.

RESURFACE...don't replace.

NU-FINISH TUB & TILE RESURFACING cleans and repairs old surfaces with their exclusive etching process. This assures a strong bond between the old and the new surface. Chips and cracks are repaired individually, before the glazing is applied. This gives you a BEAUTIFUL long-lasting, easy-to-clean surface.

RESURFACING RESTORES GLOSS AND LUSTER!
UNPRECEDENTED QUALITY AND PERFORMANCE
